During my previous role as Loading-unloading operator at petromax LPG Ltd. I worked together with my boss to design a new machine part to reduce production cost. In that project programming, designing was my responsibility. At my university our mentor advises us to make advance robot for project and we had submitted a smart robotic car as a project. In this project programming, designing, was my responsibility. in my Diploma we had submitted a wireless transformer as a final year project. I have always had an eye for the way things do. I was a very creative child. I hope this creativity will carries me to my dream job. Other members of the team often came to me for advice to learn SolidWorks. Due to my excellent communication skills, I was able to deliver feedback in a positive light.

Thank you for your time consideration. I will look forward to hearing more about the position and the company.

Sincerely,
Md kamruzzaman
